

ABSTRACT OF THE DISCLOSURE

Electrostatic composition based on a polyamide matrix

5    The invention relates to a composition based on a  
polyamide matrix comprising electrically conductive  
charges and antistatic agents. This composition makes  
it possible to obtain plastic articles, for example,  
body parts used in the automobile industry that are  
10   well-suited for painting by means of an electrostatic  
paint deposition process.
